Caviare Plus is the result of an exclusive scientific design, which combines the caviare and argireline.

With the contribution of flavosterone, which is a soya extract and imitates certain hormones; having a marked restorative effect on mature skins through increased blood flow.

Caviare Plus contains antarcticine, a product based on proteins extracted from the Antarctic Ocean. Evidence shows that they greatly increase the quality and quantity of collagen; leading to greater hydration and a reduction in fine skin wrinkles. Antarcticine is a glyco protein that offers exceptional protection to skins exposed to harsh climates, preventing dehydration and drying-out.

Retinol is also present in the Caviare Plus formula, increasing epidermis cell renewal, oxygenation, nutrition and helping to eliminate and reduce wrinkles.

This set of active ingredients and the highly researched concept of Caviare Plus, make this cream a valuable element in fending off undesired skin symptoms produced in ageing skin.
